

Unit 2 – Reflections

Unit 2 was quite interesting as I went reading deeper into the security of software and the external and internal risks companies and organisations face. I prepared a blog post expressing my opinion for the statement “people are the biggest risk of cyber security”. I selected five terms from the ISO/IEC Standard 27000 Section 3 Terms and Definitions document and associated my opinions with these terms.

Furthermore, I read about the Scrum agile life cycle (SALC) approach, which is a collection of five steps that developers should perform in order to deliver an effective and efficient project. I have not worked professionally with computing yet, however, I believe SDLC will be an important aspect for completing corporate projects.
