

Unit 1 – Reflection

In Unit 1 I started by learning the history and definitions of Information Security Management and the most common threats. Additionally, I started drafting the first Collaborative Discussion regarding the network safety of a medical mannequin.

This was just my first contact with the security of the networks, but I found it quite interesting.

Furthermore, we were divided into four different groups, and I was assigned to Group 4.

Team Meetings Notes:

- We had our first call, where we discussed a few things about ourselves, and we presented our experience (professionally and personally).
- We created a WhatsApp group to make our communication easier.
- We also created a SharePoint page for our group to collaborate our documents easier.
- Finally, we prepared and signed our team contract.
