

Unit 3 – Reflection

During Unit 3 of my Software Engineering Project Management module, I studied the stages of the software development life cycles (SDLC) model, the importance of managing a project and the requirements collection through the Volare template.

Moreover, I completed an e-Portfolio activity regarding an online system and how it might operate at the back-end using data structures. I chose Facebook as I use it almost daily.

Additionally, in Unit 3 we had a call with my team to start delegating tasks to every member for our upcoming assignment in Unit 6.
