

Unit 8 – Reflection

During Unit 8 I studied the different levels of quantitative data, along with the concepts of inference and hypothesis testing.

Furthermore, I worked with an excel activity where I was completing hypothesis testing exercises using advanced formulas.

While I already had an advanced excel certification, it was nice working with it as it was a long time ago since I last used it.

In general, Unit 8 finally felt more relaxed as I still had some time until the next assignment in Unit 10.
