

Unit 5 – Reflection

In Unit 5 I further researched some network tools and components including LAN, WAN and Cloud technologies.

Furthermore, I started reading the next unit's assignment to understand the requirements and make a plan on how to complete it.

Team Meetings Notes:

- In our 5th meeting, we decided to select the e-commerce type for our AWS website. We also informed Group 1.
- We started uploading our files from our previous scans to our SharePoint in order to make a plan for our assignment.
- We discussed the ICMP and TCP ports we will allow on our AWS website.
