

Unit 3 – Reflection

In Unit 3 I read about the network fundamentals and their components. This included the ISO/OSI model, the TCP/IP protocols and the IPv4 and the novel IPv6. I really liked Unit 3 as I had been interested in networks since I was a young teen.

Furthermore, I performed some basic network scans against a URL provided by my tutor.

Team Meetings Notes:

- This week we performed some fingerprinting against our website.
- We also shared our URL with Group 1, in order to initiate their scanning process.
- We started working with some scan tools to become more familiar with their functions.
- We discussed our findings and explained everything so that all team members can be on the same page.
