

Unit 7 – Reflections

Unit 7 was a rather relaxing week. It was highly appreciated after the previous week. During Unit 7 I was introduced to the fundamentals of Operating Systems and how secure their usage is. Additionally, I worked with Codio to create a shell that includes the ADD, HELP and EXIT commands. While I had to search for assistance, I was able to use commands I learnt in my previous object-oriented programming module. Overall, the week was just as calm as I wanted it to be.
