

Unit 11 – Reflection

Unit 11 was a very hectic week as the deadline for the submission of the final assignment had arrived. My team and I dedicated many hours to complete our 15-page executive summary and submit it.

After completing the assignment, we started working on our debate presentation “It is our belief that the future of the Internet is based on the adoption of IPv6 and the rollout of the associated security measures (DNSSEC, HTTP/3, IPsec, etc.)”, a very interesting topic!

In our Executive Report, I prepared all EU GDPR and PCI-DSS sections (issues and recommendations), I worked with the conclusion section where I presented a summary of the data in our report and finally, I reviewed and corrected all typographic and grammatical errors and I polished the assignment before we submitted it.

Team Meetings Notes:

- Members completed their part of the work.
- All parts were transferred in one final document, the first draft.
- The first draft was reviewed, and typographical and grammatical errors were corrected.
- After the corrections, we polished the final document and submitted it.
