**Unit 6 – Reflection**

In unit 6 we had to complete and submit our Project Report assignment. For this assignment, we would need to contact Group 2 (our customer) in order to collect their requirements for the toy product we will develope for them. Similarly, Group 2 collected our requirements for the toy they would develop for us.

Our project report had to include the agreed requirements, a sprint plan describing how we carried out the requirements and the estimates. As the word count was 1000 words, and our team consists of 7 people, we completed the assignment by collaborating all together.

Additionally, during unit 6 I worked with pytest as a way to test Python applications.

Overall, while the week was very busy, it felt nice to collaborate with my team members and work with a little bit of code.
