Unit 2 – Reflection

In Unit 2 I started setting up my AWS server to perform all required scanning assignments later, but due to some administrative problems, I was not able to complete the setup. During this week, I collaborated with my team to prepare ourselves for the first seminar regarding the STRIDE/DREAD tools.

Team Meetings Notes:

- Even though my AWS account had access problems, we managed to set up a group account.
- We discussed all vulnerabilities and security risks known to us and compared them with the way AWS is set up.
- We discussed the STRIDE/DREAD tools.
- We started working on our presentation.
