Unit 2 – Reflection

During Unit 2, I continued studying the approved literature review topics in an effort to pick the one I would like the most. I eventually decided to research the deep learning field. Specifically, after consulting my tutor, I decided to research the techniques to develop a deep learning neuron network.

Additionally, I studied the best ways to formulate research questions and how to prepare a literature review and research proposal.

In unit 2 I felt more organised with myself and completed all tasks in an easier and more fun way.
