Unit 3 – Reflections

In Unit 3, I dived more into the coding section of the software. I performed some activities using Codio (the IDE the University of Essex uses) where I compiled a program using C and Python. This activity was very fun, I am new to coding but as it turns out I have a secret love for it.

Furthermore, during this unit, we worked as a team to prepare an activity about how secure programming languages are. Specifically, we researched what factors determine what makes a programming language secure (or rather safe) and whether Python is considered a secured programming language.
